# Lincoln's Daguerreotype

1860s

# Eadweard Muybridge - Galloping Horse

1878

Photographs by Eadweard Muybridge

# Kodak's Early Camera

1888

THE  
**KODAK**  
CAMERA.

Silver Medal at Minneapolis Convention  
P. A. of A. for most important invention  
of the year.

PHOTOGRAPHY REDUCED TO THREE MOTIONS.

1. Pull the Cord. 2. Turn the Key. 3. Press the Button.

And so on  
for 100  
Pictures.

ANYBODY CAN USE IT.

Size of Camera,  $3\frac{1}{4} \times 3\frac{1}{4} \times 6\frac{1}{4}$  inches.  
Weight, 1 lb. 10 or.  
Size of Picture,  $2\frac{1}{4}$  in. diameter.

**PRICE, - - - \$25.00**

Price includes hand-sewed sole leather Carrying Case, with shoulder strap and film for 100 exposures. Amateurs can finish their own negatives or send the roll of exposed films to the factory by mail to have them developed and printed.

Price for developing, printing and mounting 100 Pictures, including spool 100 films for reloading Camera, - - - - - \$10 00  
Spool for reloading only, - - - - - 2 00

Uncapping for Time Exposures.

THE EASTMAN DRY PLATE AND FILM CO.,  
15 Oxford Street, London. | ROCHESTER, N. Y.  
Send for Descriptive Circulars.

XX

# Color Film Paradigm Shift

---

1934

From multiple lenses or multiple exposures  
to multiple layered film

The transition from the optical approach to the  
chemical approach formed the new basis for  
color photography

Mannes & Godowsky  
1920's

# Mannes & Godowsky

1930s

*(The Story of Kodak, Douglas Collins p. 205)*

Protective Layer

Blue-sensitive Emulsion

Yellow Filter

Green-sensitive Emulsion

Interlayer

Red-sensitive emulsion

Foundation Layer

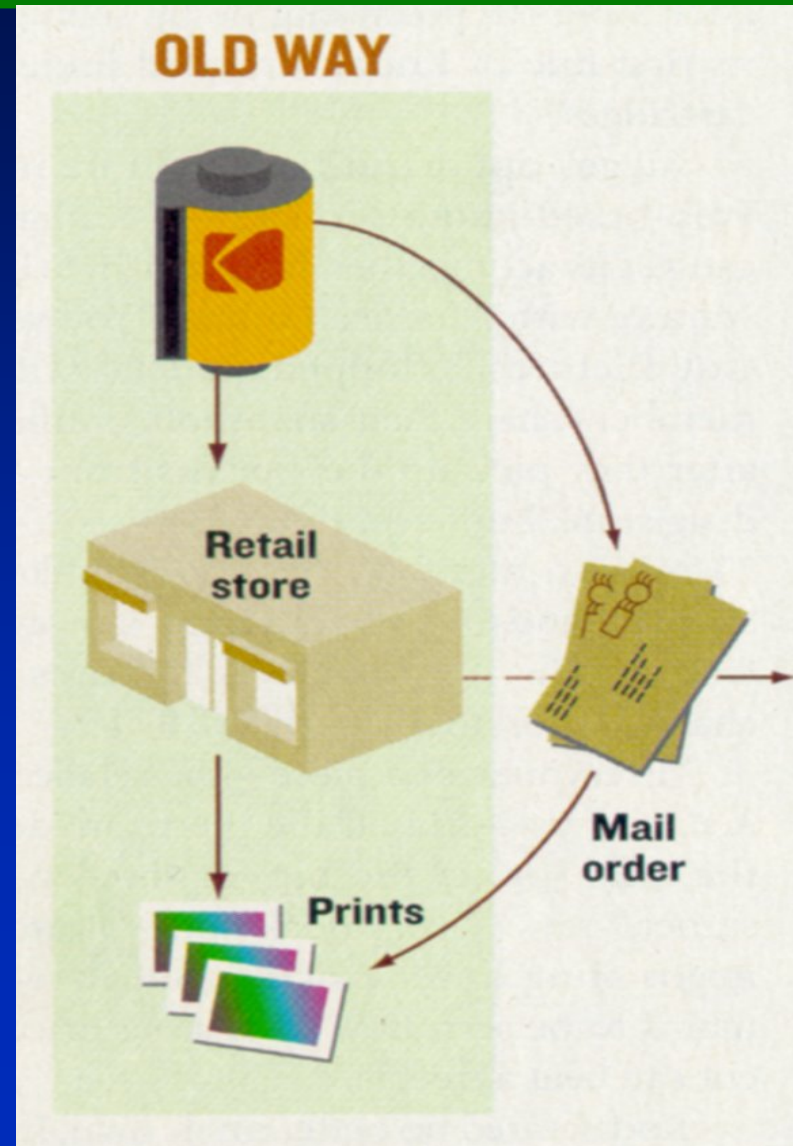

Acetate Base

Anti-halation Backing

*(fig. 1.6, Color Photography, Robert Hirsch, p. 5)*

# Old Way – Mail film and receive prints

1940s

# Digital Cameras

---

# Photo-detector Technology

# CMOS Technology

---

- Complementary metal oxide semiconductor
- Cheaper manufacturing technology than CCD's
  - Follows the semiconductor industry cost curves
  - Reduces the number of chips/camera required
- Processing (which is “free”) can perform calculations on each pixel within frame time (e.g. correct for lighting, motion blur, etc.).

# Bayes Pattern

1994

Charge-Coupled Device  
Kodak DCS420

\$14,000 approximately, June 1994

# Requirements For Pervasive Digital Photography

---

- High resolution, low cost image acquisition devices
- Sufficient computer processing power and memory systems for digital manipulation
- Image enhancement software with easy-to-use interfaces
- High density, low-cost local storage systems

# Requirements For Pervasive Digital Photography

---

- Cheap LCD displays for previewing
- Bandwidth! Bandwidth! Bandwidth!
  - High network bandwidth (wired) for distant transmission
  - Fast throughput (e.g. Firewire) for local transmission
  - Wireless bandwidth (local) for ease of use
- High quality, low cost digital printers

# PROFESSIONAL Digital Cameras

2014

Canon EOS 5DSR  
50.6 MegaPixels  
\$3,899

Nikon Digital SLR  
16.2 MegaPixels  
\$5,999

# Extreme Imaging

# Digital Geometry Capture.

---

# Digital Geometry Capture

---

- Photographic methods
- Laser scanning
- Pattern projection methods
- Time of Flight

# Simple case

Known camera positions  $(x_e, y_e, z_e)$ , camera optics, known corresponding points each image.

# Early Work

1975

# Sagan House

1975

# Capturing Geometry from Photographs

---

Can we reconstruct the 3D geometry from a set of photographs from the same camera?

# Autodesk 123 Catch

Autodesk

2017

- “The advent of digital photography and the recent growth of photo-sharing websites ( [flickr](#) ) have brought about the seismic change in photography and the use of photo collections.”<sup>1</sup>
- A search for the word “Rome” on [flickr](#) returns two million photos.
- This collection, or others like it, capture every popular site, facade, statue, fountain, interior, café, etc.

# Characteristics of Typical Photo Sets

---

- The photos are **unstructured**
  - No particular order or distribution of camera viewpoints
- The photos are **uncalibrated**
  - Nothing is known about the camera settings (exposure, focal length, etc.)
- The **scale** is enormous
  - (millions, not thousands of photos)

and

**We need to do this fast!**

# Correspondence and 3D Structure from Different Camera Positions

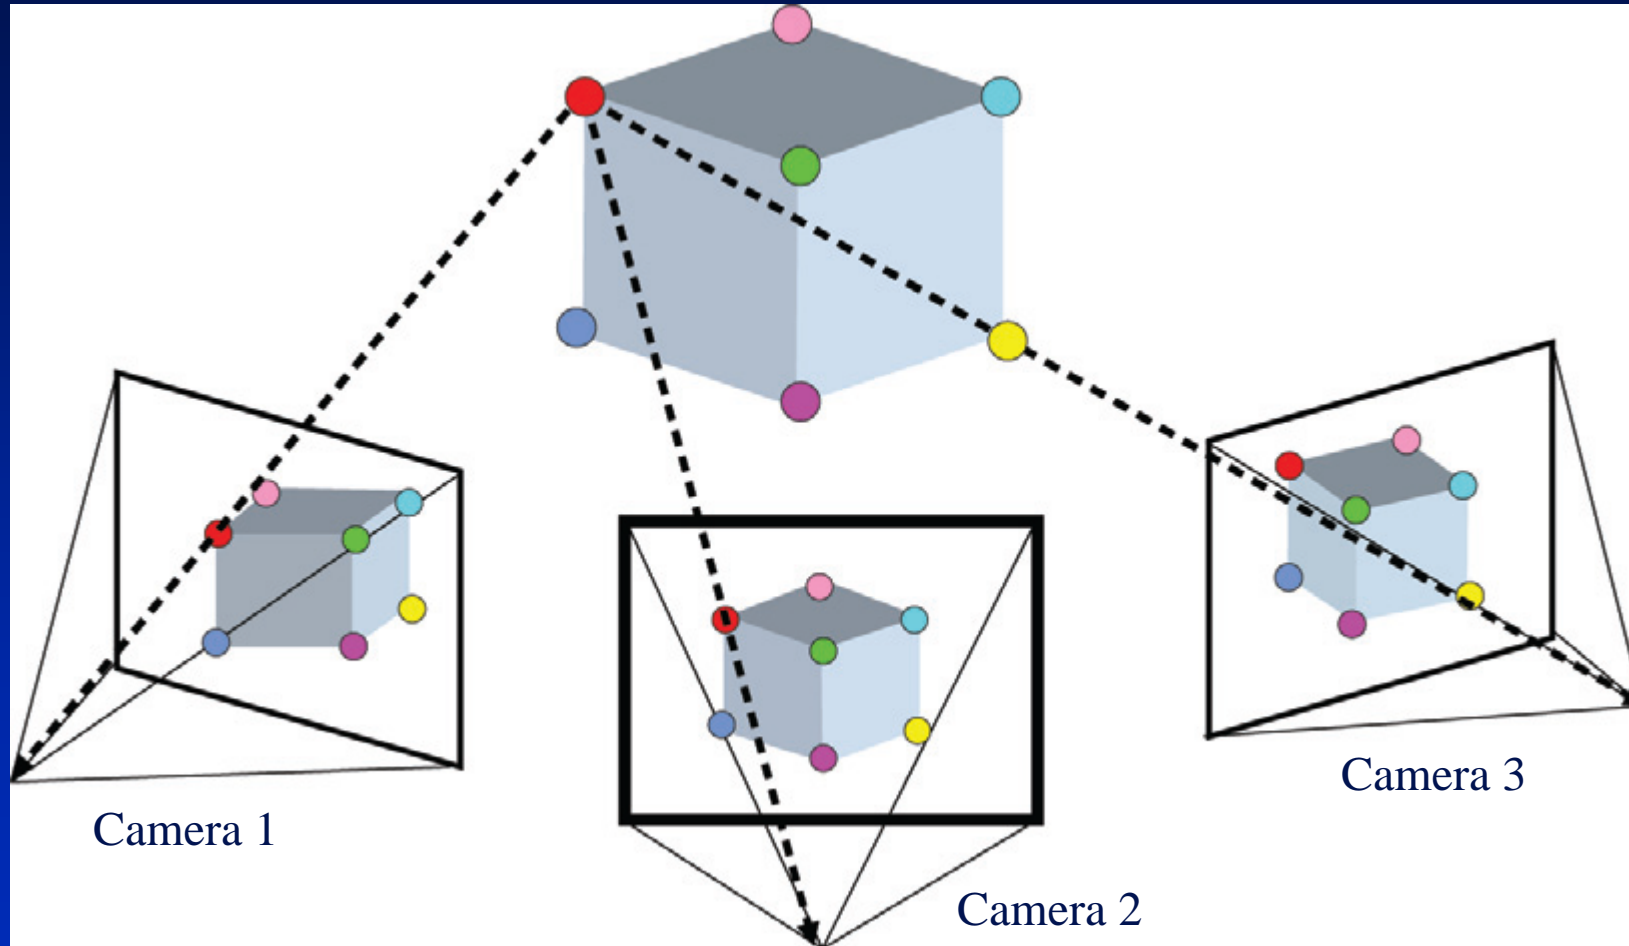

*Note:* The pictures are in correspondence  
2D dots with same color correspond to the same 3D points.

# 3D Structure from Different Camera Positions

# 3D Structure from Different Camera Positions

Assuming the position of the red dot is known, there is reprojection error in Camera 3.

# Change the Problem to an optimization problem

---

- Minimize the sum of the squares of the reprojection errors.
- This non-linear least squares problem is difficult to solve due to local minima and maxima.

# Feature Detection and Matching

The position and orientation of scale-invariant feature transform (SIFT) features on an image of the Trevi Fountain.

# Trevi Fountain

Rome Italy

# Feature Detection and Matching

A track corresponding to a point on the face of the central statue of Oceanus at the Trevi Fountain, the embodiment of a river encircling the world in Greek mythology.

# Colosseum

The Colosseum (Rome)

Reconstructed dense 3D point models. For places with many available images, reconstruction quality is very high.

- Time of Flight

# Pulsed Modulation

- Measure distance to a 3D object by measuring the absolute time a light pulse needs to travel from a source into the 3D scene and back, after reflection
- Speed of light is constant and known,  $c = 3 \cdot 10^8 \text{m/s}$

Bared-teeth

Pant-hoot

Play face

Scream

Bulging-lip face

# Eckman

## anger

- 1 eyebrows down and together
- 2 eyes glare
- 3 narrowing of the lips

## disgust

- 1 nose wrinkling
- 2 upper lip raised

## fear

- 1 eyebrows raised and pulled together
- 2 raised upper eyelids
- 3 tensed lower eyelids
- 4 lips slightly stretched horizontally back to ears

## happiness

- A real smile always includes:
- 1 crow's feet wrinkles
  - 2 pushed up cheeks
  - 3 movement from muscle that orbits the eye

## sadness

- 1 drooping upper eyelids
- 2 losing focus in eyes
- 3 slight pulling down of lip corners

## surprise

- Lasts for only one second:
- 1 eyebrows raised
  - 2 eyes widened
  - 3 mouth open

## contempt

- 1 lip corner tightened and raised on only one side of face
